

Automate To Compete

When MultiCam first started to build CNC routers in 1992, our main focus was to help small shops be competitive through automation. To accomplish this, we had to design a system that was reliable, easy-to-use, and cost effective. As the success of the MultiCam grew, automation soon became the main ingredient allowing us to compete in today's world market. Today MultiCam builds machines for entry-level shops as well as some of the world's largest manufacturers. We have 9 CNC machining centers, a high-definition CNC plasma cutter, and a CNC press brake in our 108,000 square foot production facility. Over time we have evolved our products to take advantage of the automated tools that we have. Thanks to automation, today's MultiCam is faster, more accurate, and easier to use than its predecessors.
